

Xtreme Mountain Development

Company Overview: Manage construction of custom mountain homes

web site: www.xmdhomes.com

Location: Denver, Colorado

Industry: Construction

NetDocuments Usage: Document Management

Software switched from: File Directory Structure

CHALLENGE

- "Sharing information with our personnel who are geographically dispersed at various project sites."
- "Find a system that is easy to use and requires minimal training."
- "Because all of our projects are spread out over 100 miles and we were small enough when we started that we were trying to consolidate how we could have personnel in different locations but still be able to share information because we were not big enough or in one central location we had no server or network or anything like that. So NetDocuments was very easy to start as well as a cost effective solution for us to allow everyone who worked for us no matter their location to tap in to the same information. It works great and is very easy to teach users and is very intuitive. It hasn't taken a lot of time to implement and train people. It has been very simple to get people to use it... I have other things to do beside baby sit people!"

SOLUTION

- "Comparing NetDocuments to a hardware solution was based on total cost of ownership including upfront costs and time to administer. The benefits we saw with NetDocuments were good pricing, easy to scale up and customize to what we needed, and flexible security access controls."
- "Security rights were very critical to us to control the rights of the various employees."
- "We have to approve invoices on all jobs. We can now scan those invoices and then approve online. We need to make sure contractors have contracts before they go onsite. One person can work on the contract, add it to NetDocuments and others can review. We have now found all sorts of ways we can make our procedures more efficient by having all of the tools of NetDocuments. And we have eliminated the need to fax everything."

RESULTS

- "We did not have to invest in a \$5,000 server."
- "We are using a document management service that is virtually maintenance-free. I can now sleep well at night knowing that all of our important documents are stored electronically and are being backed up in your world-class data centers."
- "We can expand NetDocuments to meet the growing needs of our company."
- "By centrally locating our documents on the Web and providing universal access, our people who are out on job sites are more efficient with their time, thus saving the business money."
